

### Qisda corporation

#### Forest sustainability and biodiversity policy

In line with the United Nations Sustainable Development Goals to protect the sustainability of forest ecology and halt the loss of biodiversity, Qisda expects and commits to contribute and operate internally to the forest ecosystem and biodiversity, as well as cooperate externally with its supply chain and brand customers.

1. Qisda must conduct an impact assessment on forest ecology and biodiversity for new investments and projects in advance. Promise not to destroy forest ecology and biodiversity, and continuously monitor the protection of forest ecology and biodiversity.
2. To meet the needs of brand customers, Qisda provide environmentally friendly, recyclable and renewable paper and packaging materials technology solutions to reduce the environmental impact of forest ecology and biodiversity from the perspective of life cycle.
3. Environmentally friendly office supplies shall be adopted for internal operation. In addition, energy saving, carbon reduction, waste reduction and recycling shall be continuously promoted to reduce the impact of operation on the forest ecological environment.
4. Continue to promote afforestation and assist in biodiversity conservation to ensure sustainable ecosystems in factories, communities and society.
5. Provide staff with environmental ecology training courses to ensure a better understanding of the need to conserve forest ecology and biodiversity.
