

2025 Qisda Conflict Minerals Report

Report Introduction

Qisda is committed to responsible mineral sourcing throughout our supply chain. This includes the Covered Minerals—gold, tantalum, tin, tungsten, cobalt (collectively known as 3TG), and mica—which are used to varying degrees across our product lines. In response to the revision of EMRT, in 2025 we have expanded our due diligence scope to include copper, lithium, nickel, and natural graphite. These minerals play a critical role in emerging technologies and are increasingly subject to international compliance requirements.

Qisda works closely with suppliers to trace the origins of minerals, actively engages with global initiatives to address risks associated with conflict minerals, and transparently shares our findings with stakeholders.

Qisda CMS conflict mineral system records the country of the smelters, which can be used to determine whether it belongs to CHARAS. In order to avoid risks in single materials, we regularly have alternative sources for conflict metals. During the R&D phase, the supply chain team evaluates suppliers and identifies alternative suppliers. If the original supplier fails to complete the remediation plan, an alternative supplier is available.

These efforts reflect Qisda's continued focus on improving mineral traceability and promoting responsible sourcing practices. In this report, we share our approach and progress, helping stakeholders better understand our efforts in mineral sourcing.

About Qisda

- Qisda Corporation (formerly named BenQ Corp.) was founded in 1984, with the headquarters established in Taoyuan, Taiwan. As a global technology group that has an operational scope covering ICT industry, medical business, smart solutions, and 5G network communication business, Qisda not only provides the customers with quality innovative products and services that meet the market demand, but also looks forward to improving human life through technology and achieving the goal of “Bringing Enjoyment ‘N’ Quality to Life.”

Definition

RMI: Responsible Mineral Initiative

RBA: Responsible Business Alliance, RBA

RMAP: Responsible Minerals Assurance Process

RCOI: Reasonable Country of Origin Inquiry

CMRT: Conflict Minerals Report Template, CMRT

EMRT: Extended Minerals Reporting Template

3TGs: Defined as Tantalum 、 Tin 、 Tungsten 、 Gold

OECD: Organization for Economic Cooperation and Development

Covered country: Covered countries refer to countries near the Democratic Republic of Congo including Angola, Burundi, Central African Republic, Republic of Congo, Rwanda, South Sudan, Tanzania, Uganda, and Zambia

Implementation Process of Conflict Mineral Investigations

Reasonable Country of Origin Inquiry

- Qisda conducted efforts in good faith to determine whether the Conflict Minerals found in our products may have originated in the Covered Countries.
- Qisda filter out material suppliers and outsourcing suppliers that were most likely to provide material, products or services containing Conflict Minerals, and we sent 222 surveys to relevant suppliers in 2025.
- All related suppliers were notified through a defined process via email.
- The Conflict Minerals compliance program includes automated data validation on all submitted questionnaires. The goal of data validation is to increase the accuracy of submissions and identify any contradictory answers in the questionnaire. All submitted forms are accepted and classified as valid or invalid.
- Qisda has implemented a traceability and due diligence system based on the Responsible Minerals Initiative (RMI) Conflict Minerals Reporting Template (CMRT). Suppliers are required to disclose the smelters and refiners used in their supply chains through CMRT submissions. Qisda reviews the reported smelters against the RMI Responsible Minerals Assurance Process (RMAP) database to assess sourcing risks and identify potential sourcing from Conflict-Affected and High-Risk Areas (CAHRAs). Due to the complexity of global mineral supply chains and the position of downstream manufacturers, direct traceability to individual mines or precise countries of mineral origin is generally not available. Therefore, Qisda adopts a smelter-based due diligence approach consistent with the OECD Due Diligence Guidance, utilizing supplier declarations, smelter information, and RMAP assessment results to evaluate country-of-origin risks.

Qisda Conflict Minerals Management Steps

Step 1: Establish Strong Company Management Procedure

Qisda has established a management procedure to determine the source and chain of custody of Conflict Minerals in our supply chain.

Conflict Mineral Commitment

Qisda Conflict mineral commitment is publicly available on our website at:

<https://esg.qisda.com/uploads/files/shares/other%20reports/%E7%B6%A0%E8%89%B2%E4%BE%9B%E6%87%89%E9%8F%88/2024/19.Qisda's%20Conflict%20Mineral%20Commitment.pdf>

.

Internal Team

Qisda's management procedure includes oversight of our Conflict Minerals and investigation processes by a **conflict mineral management team** made up of representatives from Qisda such as:

Management representative/ESG Department/R&D/Sourcer/IT/PM

Control Systems

Qisda utilizes the questionnaire sent to our suppliers to gather information on the chain of custody of the Conflict Minerals included in our products and material.

Supplier Engagement

Qisda has communicated the suppliers obligations under annual supplier survey. In addition, we provide training materials on Conflict Minerals compliance to suppliers via annual conflict minerals investigation.

Grievance Mechanism

Qisda maintains a dedicated Responsible Minerals Grievance Mechanism to enable stakeholders to raise concerns regarding responsible minerals sourcing. The mechanism is publicly available through the conflict minerals mailbox (Qisda.con.mineral@qisda.com). Stakeholders may report actual or suspected issues related to conflict minerals, high-risk smelters, sourcing from CAHRAs, violations of Qisda's Conflict Minerals Policy, or non-conformance with OECD Due Diligence Guidance and RMAP requirements. Reported concerns are reviewed by the responsible minerals management team and managed through Qisda's due diligence process.

<https://esg.qisda.com/en/responsible-governance/Sustainable-Supply-Chain-Management/Local-procurement>

Step 2: Identify and Assess Risk in the Supply Chain

CMRT and EMRT is used every year to identify the sources used by suppliers' smelters. Suppliers are also required to sign that they will comply with Qisda Supplier Sustainability Code of Conduct.

The list of RMI-approved smelters will continue to be tracked after the completion of due diligence with active assessment and management of the supply chain to ensure that the minerals used do not contain conflict minerals from regions with paramilitary conflict.

Analyze data gathered on the CMRTs and EMRTs to identify potential inconsistencies or high risks smelters.

Step 3: Design and Implement a Strategy to Respond to Identified Risks

Qisda has adopted the following proactive measures to ensure the safety of minerals in the supply chain:

1. Suppliers are required to sign Qisda Supplier Sustainability Code of Conduct confirming compliance with the Conflict Minerals Policy.
2. Requirements related to conflict minerals have been included in the procurement contract.
Requirements on conflict minerals is a prerequisite to establishing or maintaining a business relationship.
3. Conduct periodic reviews of suppliers in accordance with the latest conformant and active smelters list published by RMI. All smelters must be included on the list.
If the smelters supplied to Qisda are not on above list or does not meet the customer 's qualified smelter list, Qisda will send the Conflict Minerals Prohibited Smelters Notification and set reasonable period for the supplier to make corrections.
4. Maintain a long-term relationship with the greater majority of suppliers to improve compliance.

Step 4: Carry out Independent Third-party Audits

Qisda ensures our suppliers meet the criteria stated for the smelters the supplier uses and then verifies that those smelters conform to the RMAP.

Qisda utilizes the standardized reporting templates—CMRT and EMRT—provided by the RMI to ensure the accuracy and consistency of smelter or refinery (SOR) data submitted by suppliers.

Qisda also informs the supplier to encourage the relevant smelters to participate in RMAP audit.

Step 5: Report Annually on Supply Chain Due Diligence: Public Reporting of our Conflict-Free Materials Compliance

Qisda publishes an annual report detailing its supply chain due diligence activities, including responsible minerals policies and management practices. These disclosures are publicly available on the corporate website.

Smelter List (As of 2026/07/31)
