

Raw Materials Programs

Targets for the share of third-party verified sustainable raw materials (Recycled raw materials)

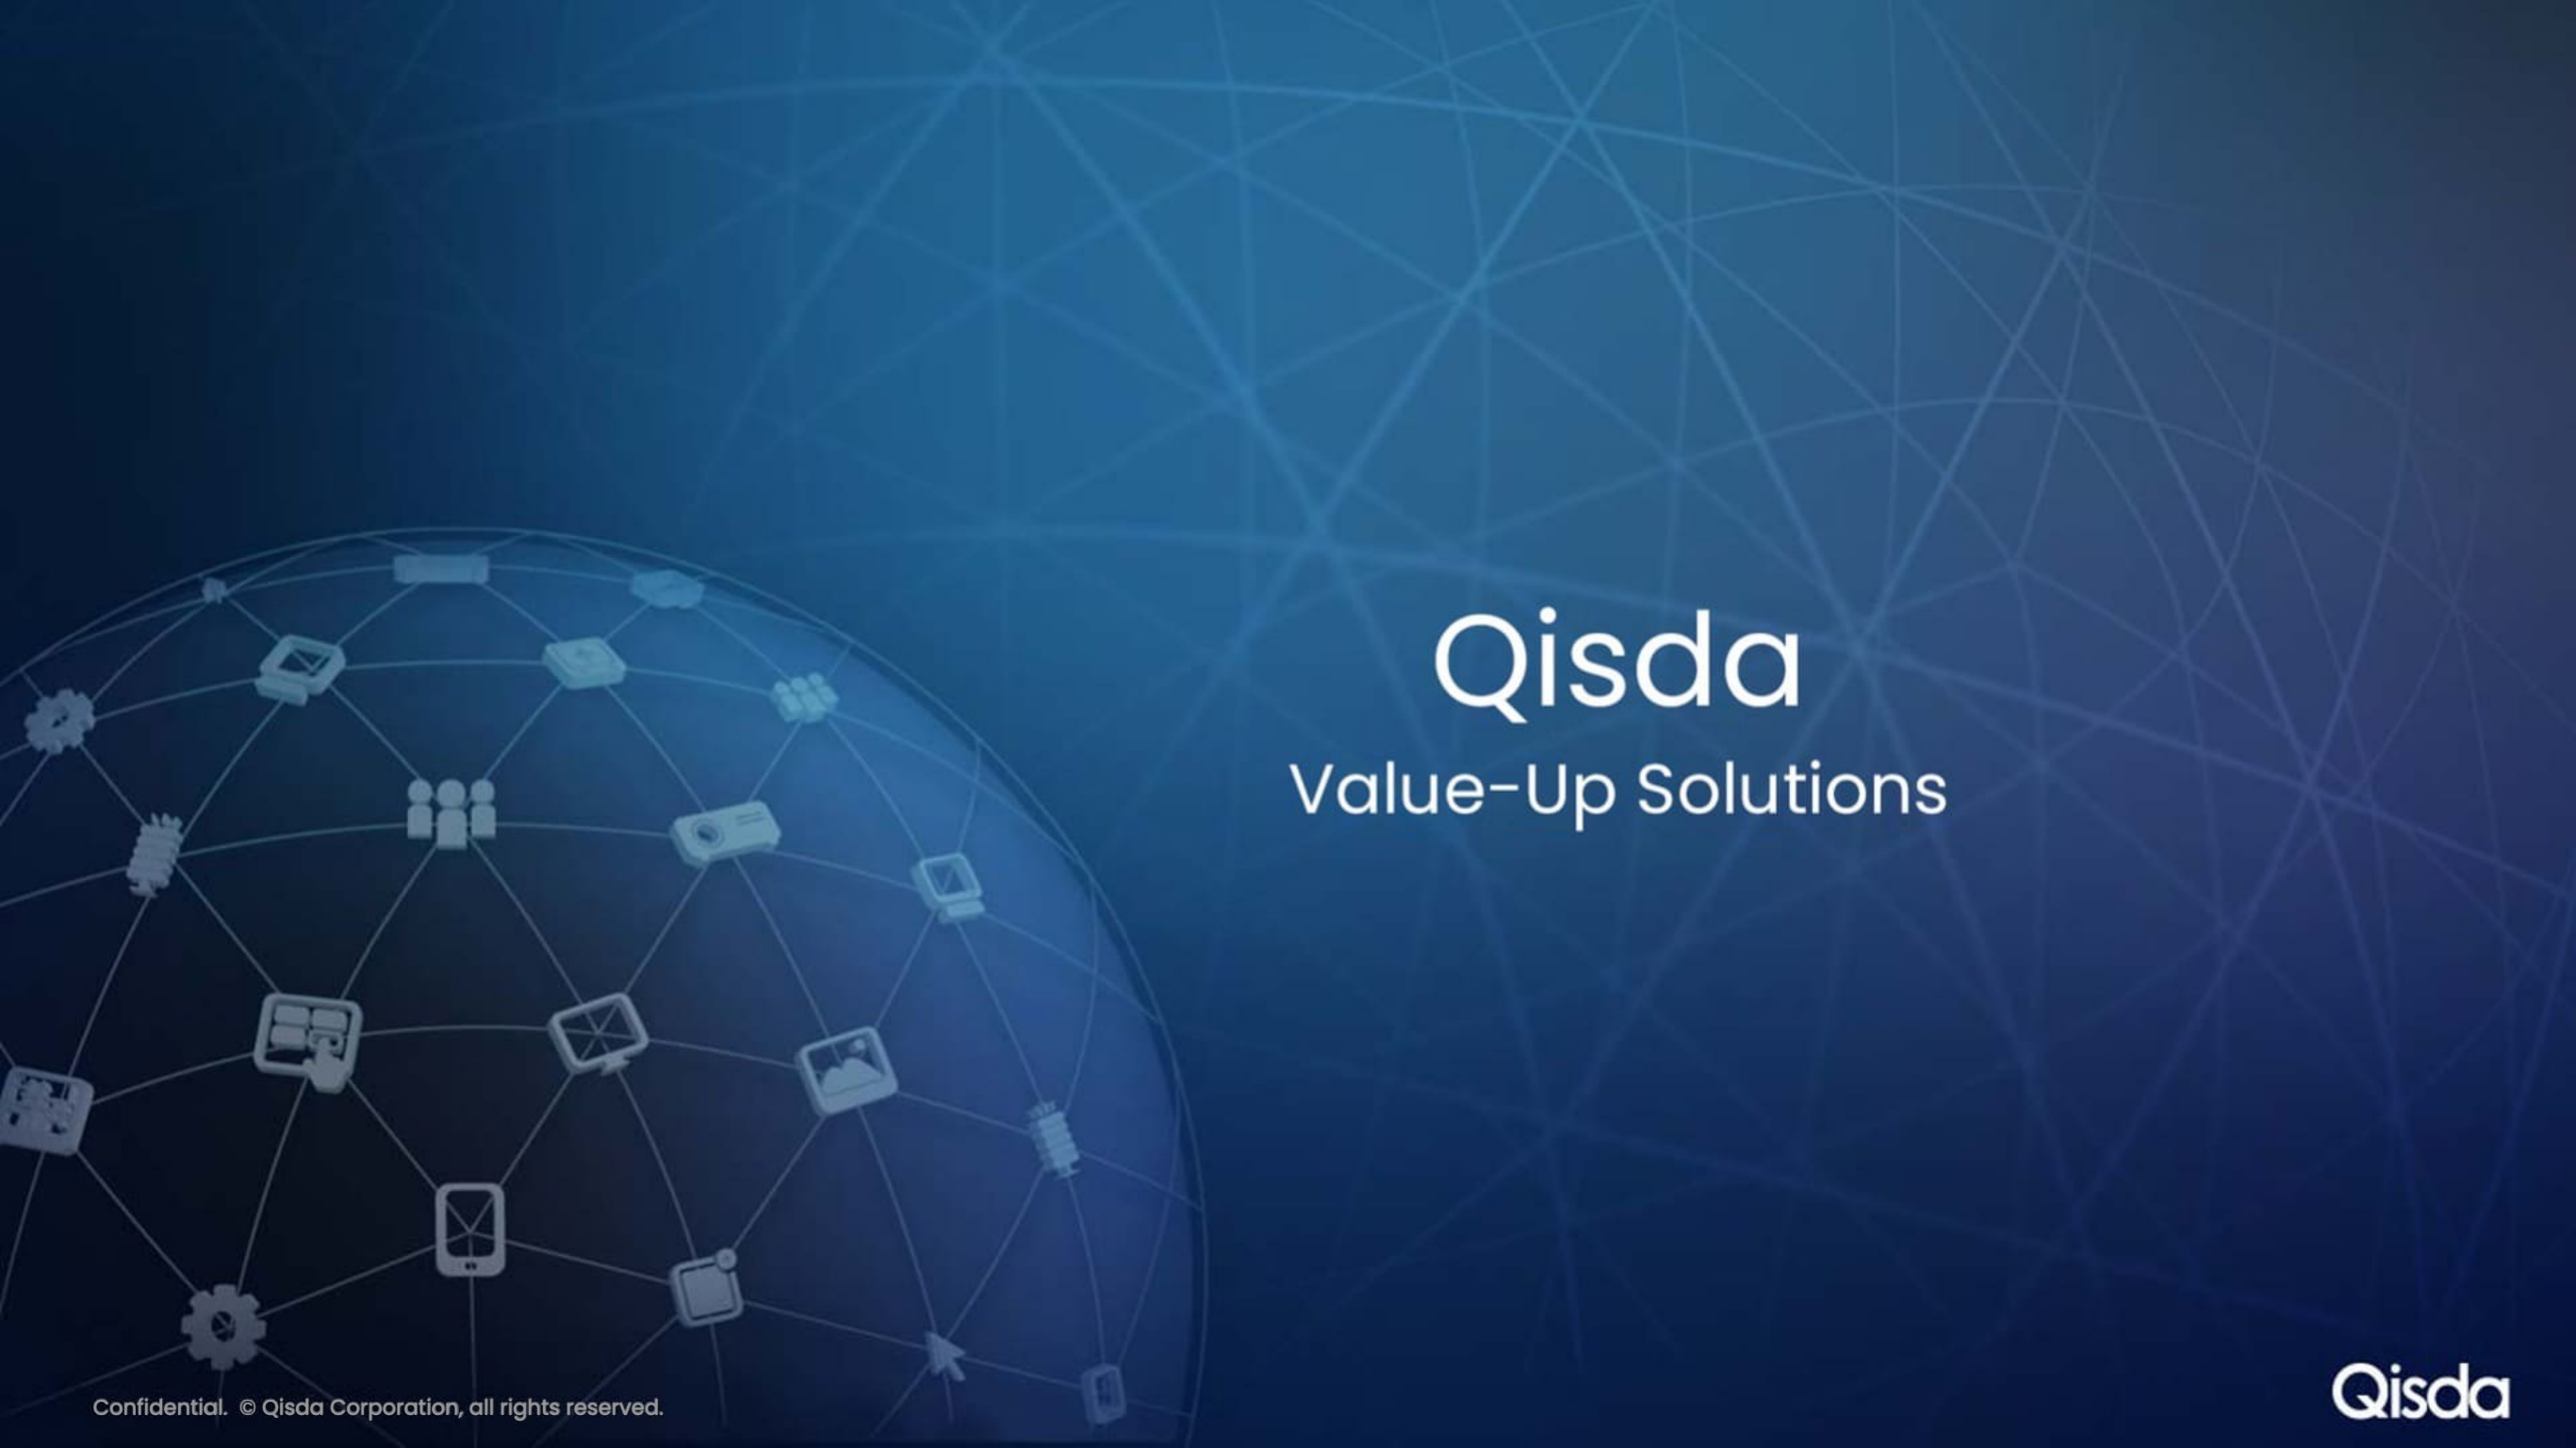

- Currently, the sustainable raw materials tracked by Qisda are primarily recycled materials. Moving forward, Qisda will continue to expand the types and increase the usage of sustainable raw materials to support the circular economy and achieve its sustainable development objectives.
- The targets for Qisda's sustainable raw materials and recycled materials (proportion of revenue):
 - (1) The proportion of monitors using recycled materials is not less than **75%**,
 - (2) The proportion of monitors using paper plastic/paper folding is not less than **75%**

Qisda has already achieved the target in year 2025.

- The recycled materials are verified by third-party.

Recycled plastics (including OBP) have obtained UL certification, and recycled metals have obtained SCS certification.

Qisda requires suppliers to meet customer requirements. If Suppliers do not meet the requirements, Qisda will look for other suitable suppliers.
