

## **Qisda Climate Change Statement**

As a global leader in technological innovation and medical health, Qisda is well aware that the impact of human activities on the environment is irreversible, so it promotes carbon management with climate strategies of "green products", "green operations" and "green supply chain", And spread our experience to the related enterprises of Grand Fleet and upstream and downstream partners to create mutual benefits and steadily move towards the goal of "2050 net zero emissions".

### **Promise:**

To realize climate transition and move towards "2050 net zero emissions".

### **Policy:**

The board of directors reviews and guides the climate change strategy, action plan, and annual goals, and the Chief Sustainability Officer is responsible for drafting, planning, and promotion, regularly reports the implementation status to the board of directors every year, and reviews the greenhouse gas reduction goals and the degree of achievement.

### **Strategy:**

#### ● **Green products**

Examine the life cycle carbon emissions and reduction opportunities of products with life cycle thinking; attach importance to green design, introduce ecological design methods, and reduce environmental impact and carbon reduction from the source of design. Use the carbon management platform to produce product carbon footprint reports to track and manage carbon reduction performance.

#### ● **Green operation**

Taking quantification/assessment, management and carbon reduction as the driving blueprint, from the inventory of organizational greenhouse gas emissions (ISO 14064-1), and the establishment of energy management systems (ISO 50001) and corporate sustainable development (ESG) KPI management systems, tracking various target achievement and reduction performance of each energy-saving and carbon-reduction measure.

#### ● **Green supply chain**

Promote the supply chain to achieve 20% carbon reduction by 2030, and plan

three promotion stages: cognition, promotion and sustainability, assist suppliers to gradually pass greenhouse gas (GHG) inventory education and training, and encourage key component suppliers to conduct greenhouse gas Inventory and reduction, to improve suppliers' self-management capabilities and disclose climate change strategies and reduction performance in corporate social responsibility reports.

- **Climate change mitigation and adaptation**

Qisda identifies climate-related risks, mitigates the impact of climate change, and implements carbon management under the leadership of the Corporate Sustainability Committee, masters and plans the carbon reduction process, and creates a climate risk matrix to protect operations from the harm of climate change, complete the management of climate risks and formulate response actions, and guide the company to mitigate and adapt to climate change.

- **Hand in hand with the Grand Fleet**

In order to achieve the goal of a green enterprise, Qisda has announced that it will move towards RE100 in 2040. Qisda will actively deepen its own green experience, and further expand the related enterprises of Grand Fleet, conduct effective management, and work together towards sustainability.
