

## Qisda Corporation Material Sustainability Policy

Qisda has dedicated to increasing the selection and use of sustainable material in the transition to circular economy, aiming to achieve the goal of sustainability economics and environmental sustainability. We develop and select sustainable raw materials with low impacts on our environment through innovation, as well as expanding the life to align ourselves with our commitment to sustainability.

Qisda has defined Sustainable Material as materials that cause less harm to our environment and health during material sourcing, production, process of using and recycling and handling of end-of-life products.

Qisda Corporation adheres to the principles as stated below, putting our Material Sustainability Policy into action:

- 1.Focus on environmental impact of raw material manufacturing and require suppliers to minimize the negative impacts of raw materials.
- 2.Avoid extracting raw materials from the key biodiversity areas.
- 3.Collaborate with suppliers and research institutions actively in joint innovation projects to explore more sustainable raw materials with low environmental impacts.
- 4.Source the sustainable raw materials with third-party verification to ensure the credibility of environmental impact assessment.
- 5.Increase of the use of recycled materials without compromising on quality.
